## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments as per the amended claims, filed December 4, 2008, have been fully considered and are persuasive. The rejection of claims 17-38 has been withdrawn. Claims 17-21, 25-32, and 36-38 are currently amended and claims 17-38 are currently pending and examined on the merits.

### ***Allowable Claims***

2. Claims 17-38 are allowed.

3. The following is an examiner's statement of reasons for allowance:

The closest prior art of record are Iwamoto (JP 2001-232289) and Michiaki et al. (JP 2001-248645).

Iwamoto teaches applying an oil repellent agent to the bearing component of a hydrodynamic bearing. Iwamoto discloses supplying the oil repellent agent through a spreading head via supply pipes juxtaposed the predetermined area at equal intervals in a radial direction ([0017], lines 1-6). A removal member is juxtaposed with the predetermined area such that a discharge pathway 17 is formed on the ring-shaped holding member ([0018], lines 9-13). After the application of the solvent, the excess is removed in a variety of ways such as overflowing, physically shaking, and discharging the excess oil repellent from the predetermined area via an exhaust pipe (i.e. removing excess oil repellent from the predetermined area of said component with an oil repellent apparatus) ([0018], lines 9-13). Iwamoto does not state or suggest fairly

Art Unit: 1792

moving/rotating the predetermined area of said component and the supply member relative to one another while the solution of oil repellent is being supplied onto said component, or suctioning the predetermined area of the bearing component to remove excess oil repellent from the predetermined area of the bearing component as per Applicants' amendment.

Michiaki teaches applying an oil repellant agent to a bearing component to prevent the scattering of lubricant. Specifically, Michiaki teaches moving/rotating the predetermined area of said component and supply member relative to one another while the solution of oil repellent is being supplied onto said component (see arrows in fig. 5; [0017]). However, Michiaki does not teach or fairly suggest suctioning the predetermined area of the bearing component to remove excess oil repellent from the predetermined area of the bearing component as per Applicants' amendment.

Upon further search no other prior art that anticipates or suggests fairly the instant claims has been located as of the date of this office action. Therefore, claims 17-38 are allowed over the prior art of record.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Francis P. Smith whose telephone number is (571) 270-

3717. The examiner can normally be reached on Monday through Thursday 7:00 AM-5:00 PM.
